Partnering with QualGent: The World's First Mobile AI Agent for QA Testing

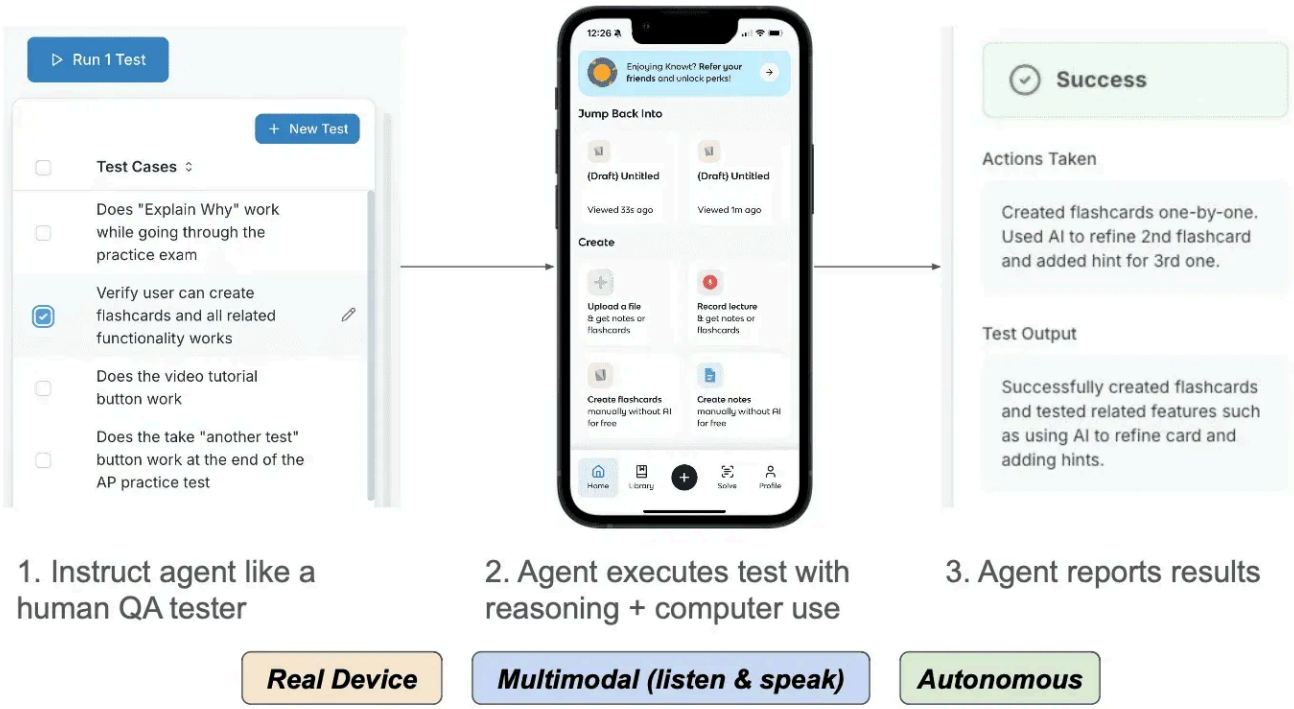

Leonis Capital · leoniscap.com/research/partnering-with-qualgent/

We are excited to lead the Seed round in QualGent, the agentic QA engineer delivering complete end-to-end mobile testing automation by tapping, scrolling, and swiping exactly like real human users.

Today's development teams are drowning in intricate UIs that demand thorough validation at enterprise scale and lightning speed. The traditional script-execute-debug cycle has become a bottleneck, stretching release timelines from days to months while severely constraining the dynamic, adaptive testing that modern applications require.QualGent closes that gap. It's **the first mobile-native AI QA agent that behaves like your best human tester but faster, smarter, and always on**. Through its multi-lingual conversational interface, self-healing architecture, and

human-like testing execution, QualGent delivers superior testing coverage and velocity compared to legacy QA frameworks, without compromising accuracy or reliability.

Their end-to-end QA testing platform completely eliminates human in the loop. From a simple text prompt, it can run comprehensive tests and deliver a full report in minutes. It behaves like a real user, navigates your app with ease, and catches problems early, all while working smoothly across both iOS and Android and fitting right into your development workflow.More impressively, when we introduced QualGent to one of our portfolio companies, their exploratory AI agent didn't just execute predefined tests: it creatively discovered a hidden bug in the signup flow that would escape even experienced human testers.

At Leonis Capital, we've been relentlessly backing category-defining companies that harness AI to transform foundational business processes. Our investments in MaintainX, Motion, Jace, Amy.vc, and other industry leaders reflect our conviction that AI will fundamentally restructure and automate how critical work gets done. Software testing is no exception.We are thrilled to support the QualGent team as they build a future where traditional QA testing becomes obsolete. If you're a development leader or engineering team looking to unlock unprecedented testing velocity and coverage in the AI era, QualGent is the breakthrough platform you've been waiting for.
